The Driskill Graduate Program
Distinguished Lecturers in Life Sciences
and the Center for Human Immunobiology
Present:

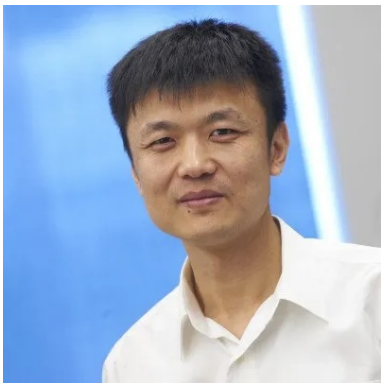

Immunological Mechanisms of Cancer Defense

Tuesday, November 3, 2026, 3:30 P.M.

Hughes Auditorium (Reception to follow in the Ryan Family Atrium)

Hosted by Caylee Silvers

Ming Li, PhD, is a Member of the Immunology Program at Memorial Sloan Kettering Cancer Center and the David H. Koch Chair in Immunologic Studies. His laboratory investigates the tissue-resident immune networks that shape organ homeostasis and disease, with a particular focus on cancer. Recent research has uncovered how tissue-resident innate and adaptive leukocytes mediate cancer immunosurveillance, how these barriers are disrupted in primary and metastatic tumors, and how they can be therapeutically restored. This work is now driving the development of next-generation immunotherapies targeting tissue-resident immunity. Dr. Li received his PhD in Biological Sciences from Columbia University and completed postdoctoral training at Yale University. He is a Fellow of the American Academy of Arts and Sciences and has been recognized with honors, including a Howard Hughes Medical Institute Faculty Scholar Award, a Rita Allen Foundation Scholar Award, and the American Association of Immunologists-BD Biosciences Investigator Award for outstanding contributions to the field of immunology.
